testing**

**3- working day
turnaround**

**Extensive
accreditation**

Industry leaders

Our founders introduced hair strand testing to the UK over 30 years ago. Today, our modern Cardiff based lab continues to set the standard by providing UKAS accredited results and expert reports within our standard three working day turnaround.

Sample types

Our preferred method is hair testing which can detect most substances. Should an individual's hair be insufficient or unsuitable for testing, we can use body hair or nail samples.

Test month by month

Hair can be segmented into sections, with each centimetre representing roughly one month of use. This allows us to build a detailed timeline of substance use.

Amphetamine	COMMON 9 PANEL 	
Benzodiazepines		
Cannabinoids		
Cocaine		
Ketamine		
Methadone		
Methamphetamines		
Opiates		
Tramadol		
Antidepressants		EXTENDED 18 PANEL 
Antipsychotics		
Buprenorphine		
Cathinones		
Hallucinogenics		
Hypnotic sedatives		
Mephedrone		
Opioids		
Propoxyphene		

Drug panels

We can test for individual drugs where needed, or provide broader insight through our panels – the Common 9 (C-9) covers the most frequently used substances, and our Extended 18 (E-18), doubles the coverage at the same cost and turnaround.

Panels provide broader insight than single-drug testing, ensuring less predictable or resurgent drugs are not missed.

Nationwide coverage

Our collectors operate throughout the UK, and can be available in 48 working hours to perform collections wherever necessary, whether at an office or a home address.
